

WASTE & RESOURCE RECOVERY

The Waste and Resource Recovery Service Line of Anthesis supports clients with achieving waste reduction and waste diversion goals, assessing markets and technologies, conducting commercial due diligence, policy research and assessment, and much more.

Key Offering	Description
 Commercial Due Diligence	Mapping waste inputs, process technology and associated infrastructure, and waste output stages for a wide range of waste infrastructure.
 Waste Tracking and Reporting	Providing technologies and strategies to track waste streams and disposal outcomes as well as establishing reporting processes.
 Improving Material End of Life	Facilitating deployment of circular end of life technologies and infrastructure by identifying options for items to be reused or recycled rather than becoming waste.
 Policy Review + Analysis	Researching and assessing relevant policies and legislation, including baseline reports, analysis of impact on operations, and strategies for proactively preparing.
 Market Assessment	Researching and providing information on current landscape, including possible incentives or restrictions, key players, key feedstocks and end markets, and other factors.
 Waste Reduction + Diversion	Implementing reduction, reuse, and recycling programs through operational support, education, outreach, and implementation.

RESULTS

Are you optimizing your sustainability goals? We can help you maximize your waste diversion programs and projects to achieve:

- Carbon emission value
- Cost savings
- Environmental stewardship
- Leadership in Circularity
